

FITTING INSTRUCTIONS

EXTERNAL GALLEY BRACKETS

- 1** Position the brackets on the flat area just below the lower body-side groove, as shown on the illustration.
- 2** Ensure the centres of the brackets are 880mm apart, and symmetrically positioned between the locker doors.
- 3** Mark the hole locations with a pen; check that they're all level. Lightly centre punch the hole centres.
- 4** Drill 5mm holes through the hole locations. Take care to only drill through the fibreglass shell, and not too much further, to avoid drilling into anything else!
- 5** Apply a fine bead of exterior grade silicone sealant to the edges of the holes to seal against water ingress.
- 6** Fix brackets to the body with the 'blind' rivets supplied.
